# Soon, dashboard to view real-time status of projects

TNN | Jul 29, 2022, 08.29 AM IST

Lucknow: To improve the connectivity to various economic zones in Uttar Pradesh, PM Gati Shakti National Master Plan (PMGS-NMP) will be given further push.

A dashboard is going to be created to view the real-time status of the ongoing projects under the scheme.

Officials of the industries department said on Thursday that two dozen departments that are executing the projects have been identified and 400 officials who are involved with giving shape to the selected projects are being trained at present to create a centralised portal through which information will be available over the upcoming dashboard.

“On Friday, all the technical and nodal officers deputed in the departments concerned have been called for training at the remote sensing application centre,” said chief executive officer of Invest UP and chief of PM Gati Shakti’s technical support unit in UP, Abhishek Prakash.

Once live, the progress of the infrastructure projects aims at linking commercial hubs and economics zones through railways, roads, waterways and canals, airports, mass transport, logistics infrastructure, drainage, power supply and distribution infrastructure, water supply, traffic light poles, bus terminals, mining activity, water resources, tourism, industrial parks among others.

Going a step further, the state government will also link the progress and daily operations of the kisan mandis, dairy, IT and electronics, excise, food safety, master planning and urban development with the dashboard.

The industries department officials said that a total of 17 layers will be created and ongoing projects and operations will be distributed within them.
