Industrial corridors are conceived to foster global manufacturing and investment destination hubs and smart cities. (Representative image credit: loveguli)

## Snapshot

- *The corridors are spread across India, with strategic focus on inclusive development to provide a boost to industrialisation and planned urbanisation.*
- *The nodes are being developed as sustainable, smart and resilient manufacturing hubs.*

The Centre has identified critical infrastructure gaps in the proposed industrial corridors in the country and drawn up a plan to provide rail and road connectivity to overcome the issue.

An internal assessment revealed that none of the nodes on the planned industrial corridors have rail connectivity to ports. To address these concerns, the Centre has planned 24 new railway and 15 new road projects.
