The Jakson Group, a provider of energy and infrastructure solutions, has provided sustainable energy solutions for the recently inaugurated Maharishi Valmiki International Airport in Ayodhya, Uttar Pradesh. The company’s contribution to airport efficiency demonstrated its commitment to sustainable energy.

Introducing a 250-kW solar rooftop system by the company demonstrates its dedication to sustainable energy efforts that meet airport operating needs. The reliability of three high-quality 500 KVA diesel generators supports the company’s commitment to airport operations.

The company’s energy solutions go beyond the airport. This advances Ayodhya’s infrastructure and sustainability. The company is a leading energy provider in Uttar Pradesh due to its wide channel partner network, reputation for excellence, and customer attention.

The company has worked on big projects worth Rs 2,000 crore for the Hon’ble Prime Minister’s Jal Jeevan Mission and the GOI’s RDSS Scheme. These projects improve the region’s infrastructure and quality of life by providing household tap connections and power to over 3,000 settlements in different districts.

Its state-of-the-art battery energy storage system (BESS) plant and fully automated solar panel manufacturing in Greater Noida establish its commitment to strengthening the national energy sector. The company is technically skilled and environmentally conscious, with 1,200 MW of output, and encourages raising it to 2,500 MW.

After meeting energy needs, the company’s Vice Chairman and Managing Director, Sundeep Gupta, underscored the company’s commitment to socio-economic advancement through targeted corporate social responsibility (CSR) efforts, with a focus on empowering women. He has highlighted the alignment between the company’s vision, government energy goals, and national and Uttar Pradesh commitments to a sustainable and resilient future.

According to India’s clean energy transition, the company’s diverse projects make it a major contributor to the renewable energy sector and support the goal of an ecologically conscious and energy-efficient future.
