

Grid-connected 320 MW solar plants at Jalaun soon

LUCKNOW : In its continuing bid to give a push to the production of renewable energy in the state, the Uttar Pradesh government will set grid-connected ground-mounted solar plants up to 320 MW in Jalaun.

The UPNEDA has invited bids for the selection of developers interested in setting up the plant. "We have invited online bids from prospective bidders for setting up to 320 MW grid-connected solar PV power pro-

jects on build-own-operate basis at Jalaun," a senior UPNEDA official said, adding that the project will be set up on government land for a lease of 30 years. A grid-connected photovoltaic (PV) system is a renewable energy system that generates electricity using solar panels. The generated electricity is used to power homes and business, and any excess energy can be fed back into the electrical grid.
