Jakson Group on Monday announced partnership with OMC Power for the implementation of a 50 megawatt (MW) solar rooftop project in Uttar Pradesh (UP).

This initiative, which Jakson claims is one of the largest solar rooftop single orders in India to date, is valued at around ₹200 crore.

As a major contributor to conserving and sustaining the environment, the project is expected to offset 62,500 tonnes of CO2 annually, equivalent to planting 25,00,000 trees.

Jakson will act as a key partner in implementing solar rooftop systems across all 75 districts of Uttar Pradesh, enabling the adoption of clean energy.

Jakson Group CMD Sameer Gupta said “Our dedication to providing cutting-edge solar energy solutions is solidified through our partnership with OMC Power. This collaboration exemplifies our capacity to execute large-scale projects that align with India’s clean energy aspirations. Together, we strive to establish new standards of excellence within the renewable energy sector.”

The project is expected to set new benchmarks in clean energy deployment and serve as an exemplary model for future large-scale renewable energy initiatives in the country.

OMC Power MD & CEO Rohit Chandra said, “By advancing solar power adoption across the state, we are reducing carbon emissions, promoting energy savings, and strengthening local infrastructure. Together, we’re driving meaningful changes in energy transitions, and turning the promise of renewable energy into impactful solutions.”
