*Lucknow, January 13*

THE TRANSFORMATION of Uttar Pradesh from a bottleneck state to a breakthrough state has happened because of technology-based platforms like PRAGATI (Pro-Active Governance and Timely Implementation), Chief Minister Yogi Adityanath said in Lucknow on Tuesday.

Addressing a press conference, Adityanath said his government is now acting not just as a facilitator, but as an accelerator, speeding up projects. "Thanks to technology-based platforms like PRAGATI, UP has been transformed from a bottleneck state to a breakthrough state. The government is now acting as an accelerator, speeding up projects," he said.

Referring to the impact of PRAGATI at the national level,

he said it has accelerated projects worth more than Rs 86 lakh crore. Of these, 377 projects are directly reviewed by the prime minister, while 2,958 out of 3,162 issues have been resolved. He added that UP has the country's largest infrastructure portfolio with 330 projects worth Rs 10.48 lakh crore. Of these, 128 projects (39 per cent) worth Rs 2.37 lakh crore have already been completed and commissioned, while 202 projects worth Rs 8.11 lakh crore are progressing within the stipulated timeframe.

Since its inception in 2015, PRAGATI has been a catalyst in transforming India's infrastructure and social sector development, he said.

Designed to integrate key stakeholders and provide up-to-date visuals of ground-level realities, PRAGATI empowers the prime minister to monitor, review and resolve issues with unprecedented efficiency. The platform's approach to streamlining governance has not only revolutionised decision making but also strengthened India's commitment to good governance, the chief minister added.
