

Airport opening: CM inspects PM visit route

CM Yogi reviewed route and inspection points for PM's visit

► Continued from P 1

During the inspection, Yogi reviewed the proposed route of Prime Minister's visit and inspection points. He gathered information about the ongoing preparations at key locations, including the passenger terminal, cargo terminal, rally venue, parking areas, various routes, helipad, and issued necessary instructions to the officials.

"In view of the proposed programme of Prime Minister Narendra Modi in Gautam Budh Nagar, I conducted an on-site inspection of the Noida International Airport, reviewed the preparations and held a meeting with officials and public representatives, issuing necessary directions," the chief minister's office posted on X.

After the inspection, a review meeting was held in the auditorium within airport premises, where detailed discussions took place regarding overall preparations, security arrangements and operational plans. CM Yogi directed all departments to work in co-ordination and fulfill their responsibilities within the set deadlines. He emphasized that considering the

presence of public representatives, dignitaries, media and a large number of people, arrangements should be systematic and efficient.

Yogi stressed extensive branding and publicity to give the event a grand and world-class appeal so that maximum people are informed. He instructed officials to ensure timely arrangements for smooth connectivity of all routes linked to the venue, cleanliness, uninterrupted power supply, drinking water, toilets, security, traffic management, transport facilities, fire safety, medical services and proper signage.

Additionally, directions were given to provide mobile toilets, help desks, drinking water and medical facilities at parking areas for people coming from different districts. The CM instructed adequate deployment of administration, police and volunteers at venue to avoid any inconvenience to public. During the meeting, administration and police presented a detailed plan for security, traffic management, parking and alternate routes through a power presentation. It has been decided to implement a four-layer security system for the event.
