

Uttar Pradesh sets new record under PM Surya Ghar Yojana

STATESMAN NEWS SERVICE

Lucknow, 26 June

Uttar Pradesh has established a new record in solar rooftop installations under the Pradhan Mantri Surya Ghar: Muft Bijli Yojana (PMSGY), further strengthening its position as the leading state in the country.

According to figures presented during the progress review meeting held in June 2026, more than 6.2 lakh households in the state have so far been provided the benefits of solar energy, which is being regarded as a major achievement toward the national target.

Under the scheme, Uttar Pradesh has achieved more than 50 percent of its target of covering 11.27 lakh families. The state accounts for 17 percent of the total solar rooftop

installations in the country and is among the leading performers.

During the meeting, UPNEDA Director Ravinder Singh informed here on Friday that Uttar Pradesh created a new national record by installing solar energy-based plants in more than 50,000 households during each of the three consecutive months of March, April and May 2026. He stated that special efforts should be made

to secure the first position for the state in cumulative household solarisation as well.

He informed that the objective should be to convert every application into an installation. It should be ensured that loan applications are approved within the stipulated time, pending loan disbursements are released immediately after loan approval, and no application is rejected for unnecessary reasons.
