

BOOM | Now even 'Kuber' wants to come to Jewar: CM

Global Firms Eye Jewar as UP's Next Growth Engine: Yogi Adityanath

UP State Bureau
LUCKNOW

Chief Minister Yogi Adityanath on Monday celebrated the launch of commercial flight operations from Noida International Airport in Jewar, describing it as a historic milestone that has transformed the fortunes of western Uttar Pradesh. Welcoming 170 farmers, including 28 women, who arrived in Lucknow on the first flight from Jewar, the Chief Minister said the region had become so prosperous that "even Kuber, the god of wealth, would want to come here." The farmers, who had dedicated their land for the airport project, were accorded a grand reception at the Chief Minister's residence. During the interaction, Yogi thanked them for placing their trust in the government and contributing to what he called one of India's most ambitious aviation projects.

Recalling the early challenges of land acquisition, the Chief Minister said there was considerable resistance when the project was first proposed. He said he personally met farmers and urged them to view the airport as an opportunity that would change the destiny of future generations. "History is created by those who seize opportunities," he remarked. Highlighting the region's transformation, Yogi said Jewar was once known for crime, poor infrastructure

CM welcomes farmers who gave land for Noida International Airport, says Jewar has transformed

and limited opportunities. Today, however, it is attracting major national and international investments. He noted that companies from across the world are eager to establish operations in the region.

The Chief Minister said the

airport would become India's first integrated cargo and Maintenance, Repair and Overhaul (MRO) hub, opening global markets for farmers and creating thousands of jobs. He pointed out that agricultural products from Uttar Pradesh could fetch significantly higher prices in international markets through the airport's cargo facilities.

Yogi also outlined future development plans, including food processing units, semiconductor facilities, data centres, a film city, toy and

apparel parks, medical device manufacturing hubs, IT cities and world-class educational institutions. He announced plans for skill development centres, improved healthcare infrastructure and expanded higher education opportunities. Assuring farmers that they would never be disappointed by the "double-engine government," the Chief Minister said the airport project was not only transforming the region but also shaping the future of generations to come.
