Lucknow, 7 August

Uttar Pradesh is rapidly positioning itself as India's manufacturing hub, with leading names like HCL, Foxconn and SAIL Solar investing in Gautam Budh Nagar, signalling confidence in the state's business-friendly ecosystem, robust infrastructure and proactive governance.

The other names investing in Gautam Budh Nagar include Avaada Electro, Amber Enterprises, Oriana Power, CESC Green Power, IB Solar and Ascent K Circuit. Officials here on Friday said that a key driver

of Uttar Pradesh's investment surge has been its customised incentive framework, offering sector-specific support through policies such as the Industrial Investment and

Employment Promotion (IIEP) Policy 2022, the FDI/FCI and Fortune 500 Investment Promotion Policy 2023, and the Semiconductor Policy 2024. By aligning incentives

with project requirements and ensuring speedy approvals, the state has built an ecosystem where global and domestic manufacturers operate with confidence and efficiency. Notably, six of the eight companies received support under IIEP 2022, while Ascent K Circuit Pvt. Ltd. benefited from the FDI Policy 2023, and HCL-Foxconn (India Chip Private Limited) under the Semiconductor Policy 2024. Officials revealed that leading the investment wave is Avaada Electro Limited, which has committed ₹16,139 crore to establish its manufacturing facility in Uttar Pradesh. The project

alone is expected to generate around 7,400 jobs, underlining the state's growing prominence in India's renewable energy manufacturing ecosystem. Close behind is SAIL Solar P6 Private Limited, investing ₹8,000 crore and creating nearly 7,760 employment opportunities, further reinforcing Uttar Pradesh's emergence as a clean energy manufacturing powerhouse. The momentum continues with Oriana Power Limited, which has announced an investment of ₹4,500 crore, while CESC Green Power Limited has committed ₹3,805 crore,

reflecting strong investor confidence in Uttar Pradesh's rapidly expanding green energy ecosystem. In a major boost to India's semiconductor ambitions, the HCL-Foxconn (India Chip Private Limited) project is bringing an investment of ₹3,706 crore under the Semiconductor Policy and is expected to create around 3,000 skilled jobs. Alongside it, Ascent K Circuit Pvt. Ltd. has announced an investment of ₹3,250 crore under the FDI Policy, signalling that Uttar Pradesh is increasingly becoming the preferred destination for high-technology

manufacturing. The state's thriving electronics ecosystem is also attracting leading manufacturers. Amber Enterprises India Ltd. is investing ₹3,232 crore to expand its manufacturing footprint, creating around 3,000 jobs, while IB Solar has committed ₹3,000 crore, generating nearly 3,200 employment opportunities. Together, these investments further consolidate Uttar Pradesh's leadership in electronics and advanced manufacturing. These marquee investments are more than individual industrial projects—they represent a

decisive vote of confidence in Uttar Pradesh's governance, policy stability and long-term growth potential. Supported by an extensive expressway network, industrial corridors, logistics infrastructure and a skilled workforce, the state is rapidly evolving into a manufacturing powerhouse that is attracting industry leaders across sunrise sectors. As these projects take shape, they will catalyse ancillary industries, strengthen MSMEs, generate quality employment and accelerate Uttar Pradesh's journey towards becoming a \$1 trillion economy.
