

# UP accounts for 55% of India's total mobile phone prodn: Yogi

## ► Continued from P 1

“UP’s govt stands firmly with investors at every stage, from MoU to manufacturing and groundbreaking to production,” Yogi said, stressing that the focus was now on translating investment proposals into projects and starting production. “Uttar Pradesh currently accounts for approximately 55% of India’s total mobile phone production and 60% of its electronic component manufacturing,” he said.

Highlighting the state’s industrial ecosystem, Yogi said UP had a land bank of over 75,000 acres for industrial investment and 27 integrated manufacturing and logistics clusters under development. The region around Jewar, he said, could become a major supply-chain hub, supported by expressways and Eastern and Western Dedicated Freight Corridors.

The chief minister also identified opportunities in semiconductors, cloud servi-

ces, artificial intelligence, clean technologies, food processing and hospitality.

He said Singapore’s expertise in urban planning could support the development of Lucknow, State Capital Region and new townships.

During the meeting, Greater Nashik Infracon Pvt Ltd received an eligibility certificate for 50 acres in the Yamuna Expressway Industrial Development Authority region to set up Universal Packaging Hub.

The Rs 775-crore project, associated with Singapore-based Universal Success Enterprises Group, is expected to generate 1,880 direct jobs.

MoUs were also exchanged with Agrocrop International for a greenfield facility producing soy protein isolate and chickpea protein concentrate, and with Blue Planet Environmental Solutions for legacy waste treatment in Noida and a 350-tonne-per-day waste processing plant in Saharanpur.
