

# Oracle doubles down on India AI investments

**AYUSHMAN BARUAH**

Bengaluru, 9 May

---

Texas-based technology major Oracle is doubling down on investments in artificial intelligence (AI) in India as it helps enterprises scale AI and generative AI (GenAI).

Oracle Database 23ai, the latest release of Oracle's converged database, is in line with the company's sharp focus on AI. The latest release includes Oracle AI Vector Search and more than 300 additional major features focused on simplifying the use of AI with data, accelerating app development, and running mission-critical workloads.
